NAME

ares_parse_txt_reply - Parse a reply to a DNS query of type TXT

SYNOPSIS

#include <ares.h>

```
int ares_parse_txt_reply(const unsigned char* abuf, int alen, struct ares txt reply **txt out);
```

DESCRIPTION

The ares_parse_txt_reply function parses the response to a query of type TXT into a linked list of *struct ares_txt_reply* The parameters *abuf* and *alen* give the contents of the response. The result is stored in allocated memory and a pointer to it stored into the variable pointed to by *txt_out*. It is the caller's responsibility to free the resulting *txt_out* structure when it is no longer needed using the function ares_free_data

The structure *ares_txt_reply* contains the following fields:

```
struct ares_txt_reply {
  struct ares_txt_reply *next;
  unsigned int length;
  unsigned char *txt;
};
```

RETURN VALUES

ares_parse_txt_reply can return any of the following values:

ARES_SUCCESS

The response was successfully parsed.

ARES EBADRESP

The response was malformatted.

ARES_ENODATA

The response did not contain an answer to the query.

ARES ENOMEM

Memory was exhausted.

AVAILABILITY

This function was first introduced in c-ares version 1.7.0.

SEE ALSO

```
ares\_query(3) \ ares\_free\_data(3)
